EXECUTIVE SUMMARY

All study intersections are expected to operate at a LOS A under existing conditions. All alternatives considered also operated with LOS A conditions. Closure of Hillside Street and 5th Street would provide safety benefits due to the grade of the 5th Street approach. Closure of the southbound approach of Hillside Street and Leon Street/7th Street would also provide better intersection operations due to eliminating the westbound stop sign. All proposed alternatives at 7th Street and Hastings Street would provide operational improvements, but the roundabout alternative would slow travel speeds on 7th Street and provide better multimodal crossings of the intersection.

INTRODUCTION

The purpose of this report is to study the existing and future traffic operations and safety along Hillside Street in Delta, Colorado, evaluate the possibility of restricting movement through the intersection of Hillside Street/5th Street and Hillside Street/7th Street, and to evaluate two intersection improvement options at 7th Street and Hastings Street. The intersection of Hillside Street and 5th Street has steep grades and restricted sight distances that have posed safety concerns (**Figure 1**), especially during winter months when ice and snow create slick conditions and vehicles are unable to stop when travelling down 5th Street. The City of Delta proposed restricting movements at this intersection, to only allow northbound and southbound through movements along Hillside Street to reduce the potential for collisions.

Figure 1 – Intersection of Hillside Street and 5th Street (facing North)

Source: Google Maps, 2021.

STUDY AREA AND BACKGROUND

The study area is along Hillside Street and Leon Street from 4th Street to Leon Street/7th Street, and along 7th Street from Leon Street to Hastings Street in Delta, Colorado (**Figure 2**). The intersections that were studied along this corridor include:

- » Hillside Street and 5th Street (2-way Stop)
- » Hillside Street and 6th Street (2-way Stop)
- » Hillside Street and Leon Street/7th Street (3-way Stop)
- » 5th Street and Leon Street (2-way Stop)
- » 6th Street and Leon Street (2-way Stop)
- » 7th Street and Hastings Street (All-way Stop)

There are five intersections within the study area, all of which are side-street stop-controlled. Hillside Street is the major road, and therefore has no stops within the study area. 7th Street has a stop in the westbound direction. 6th Street operates as the free approach with Leon Street and Leon Street operates as the free approach at 5th Street. All approaches of each of the study intersections have a single shared lane for all movements. Hillside Street has 6-foot sidewalk on the northeast side of the

roadway within the study area, with no boulevard between the edge of curb and sidewalk. 7th Street has a 5-foot sidewalk running parallel to the north and south of the roadway. The sidewalk on 7th Street is not offset from the roadway, aside from a section on the north side of 7th Street, directly to the east of Leon Street for approximately 175 feet. The sidewalk then shifts to remain directly adjacent to 7th Street for the remainder of the study area. A 5-foot sidewalk runs parallel to Leon Street, throughout the study area, offset 12 feet to both the east and west of the roadway. A 5-foot sidewalk parallels 5th Street, 20 feet to the north and south of the roadway. A 5-foot sidewalk also runs parallel to 6th Street, only to the north of the roadway, offset at a minimum distance of 12 feet.

Figure 2 – Study Intersections

ROADWAY CHARACTERISTICS

Hillside Street is a two-lane roadway from 4th Street to 7th Street and Leon Street. The posted speed limit along the Hillside Street is 30 mph. Leon Street, 5th Street, 6th Street, 7th Street, and Hastings Street have posted speed limits of 25 mph. There is a 15-mph school zone speed limit on 7th Street approximately 800 feet east of the study intersection, due to its proximity to Garnet Mesa Elementary School.

Existing average annual daily traffic (AADT) is approximately 3,500 vehicles per day along Hillside Street. The daily traffic volume experiences seasonal and spatial variation that can be as high as 3,670 vehicles and as low as 2,790 vehicles per day. Approximately 400-550 vehicles per day turn on and off Hillside Street from 5th Street and 6th Street on average. Hillside Street and Leon Avenue/7th Street has the highest intersection volume with approximately 4,500 vehicle per day going through the intersection.

FUNCTIONAL CLASSIFICATION

Most streets and highways have a predominant function: either to provide the motorist with access to abutting land or to allow movement through an area. Functional classification is an important and widely accepted tool in planning highway system development and in fiscal planning. According to the City of Delta, the roads within the study area are classified as:

- » Hillside Street: Minor Arterial
- » Leon Street: Collector
- » 5th Street: Local
- » 6th Street: Local
- » 7th Street: Minor Arterial
- » Hastings Street: Local

MULTIMODAL CONSIDERATIONS

The study area does not include dedicated bike facilities or bus routes. An existing trail does parallel the west side of Hillside Street; however, the trail is currently a gravel trail and ties into the shoulder of Hillside Street north of 5th Street. The existing sidewalk facilities provide pedestrian access throughout the study area. Goal #1 in the City of Delta's Transportation and Connectivity plan is to better enhance complete streets project. The Hillside Street corridor does offer an opportunity to expand or enhance the pedestrian and bicycle facilities along this roadway.

EXISTING CONDITIONS

The current traffic volumes, parking utilization, and traffic control characteristics were studied to determine the existing traffic operations conditions.

TRAFFIC VOLUME

KLJ collected 24-hour traffic counts over a 12-month period using Streetlight data to analyze peak seasonal fluctuations in volume. Streetlight data was collected in origin-destination pairs to determine turning movement counts. **Figure 3** shows the count locations for the Streetlight data collection.

Figure 3 – Streetlight Data Collection Locations

Figure 4 – AM Peak Hour Traffic Volumes

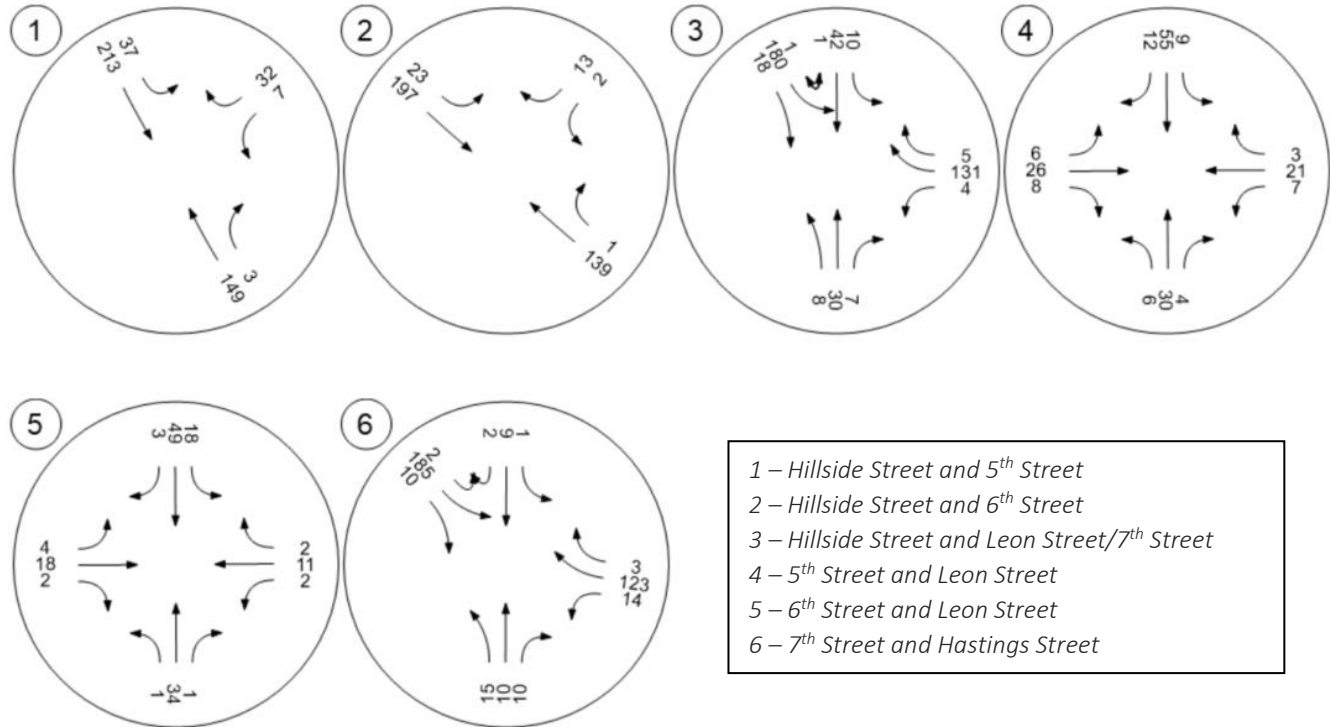

Figure 5 – PM Peak Hour Traffic Volumes

TRAFFIC OPERATIONS

METHODOLOGY

Intersection level of service (LOS) analysis is based on the *Highway Capacity Manual (HCM)* methodology. Control delay thresholds for each level of service can be seen in **Table 1**. At intersections, LOS is a function of average delay per vehicle where LOS “A” represents free-flow traffic and LOS “F” represents unacceptable delay. LOS “E” or worse is considered deficient, in accordance with the CDOT standards. In the case of unsignalized intersections, the LOS is measured based on the worst approach delay observed at the intersection. This document includes the Existing and Build conditions in 2022. Each scenario was evaluated for the AM and PM peak periods. Traffic models were created and analyzed for the traffic operations using VISTRO, which included geometry such as number of lanes, storage lengths, link distances, speed limits, and traffic volumes.

Table 1 – Intersection Delay and Level of Service Thresholds

LOS	Control Delay Per Vehicle (sec.)	
	Unsignalized Intersection	Signalized Intersection
A	≤ 10	≤ 10
B	> 10 and ≤ 15	> 10 and ≤ 20
C	> 15 and ≤ 25	> 20 and ≤ 35
D	> 25 and ≤ 35	> 35 and ≤ 55
E	> 35 and ≤ 50	> 55 and ≤ 80
F	> 50	> 80

SCENARIOS

Existing conditions and three Build scenarios were modeled for 2022 volume conditions.

Build Scenario 1 (Build 1) refers to the proposed movement restrictions at the intersection of Hillside Street and 5th Street, in which only the northbound and southbound through movements would be allowed. For modeling purposes, southbound left and westbound right movements at this intersection were rerouted to E 3rd Street and Grand Boulevard, which would increase travel time for vehicles by one minute. Northbound right and westbound left movements were assumed to use 6th Street and Grand Boulevard, with no impact on travel time. The Build 1 scenario also changes the intersection of Hillside Street and Leon Street/7th Street to a two-way stop, with Hillside Street and 7th Street moving freely. The intersection of 7th Street and Hastings Street was converted into two curved offset three-way intersections, with free east/west movement along 7th Street, shown in **Figure 6**.

Build Scenario 2 (Build 2) included two alternative options at Hillside and Leon Street/7th Street and the 7th Street and Hastings Street intersections. The City of Delta has proposed removing the southbound approach at the intersection of Hillside Street and Leon Street/7th Street and converting it into a dead-end or a small cul-de-sac. This alternative was proposed so that the eastbound and westbound approaches (Hillside Street and 7th Street, respectively) would move freely without the existing 3-way stop today. The proposed intersection would be side-street stop-controlled, with only Leon Street requiring a stop in the northbound direction. The intersection of 7th Street and Hastings Street was converted into two small offset roundabouts, shown in **Figure 7**.

Build Scenario 3 (Build 3) included an additional alternative option at the 7th Street and Hastings Street. Similar restrictions at the intersection of Hillside Street and 5th Street were included in this scenario, allowing only northbound and southbound through movements. The intersection of Hillside Street and Leon Street/7th Street was modeled similarly to the Build 1 scenario. The intersection of 7th Street and Hastings Street was converted into two straight offset three-way intersections, with free north/south movement along Hastings Street, shown in **Figure 8**.

The build scenarios are summarized below:

- » No-Build – Existing lane configuration and geometry
- » Build 1:
 - Hillside Street and 5th Street – westbound approach closed
 - Hillside Street and Leon Street – two-way stop-controlled (Hillside Street free moving)

- 7th Street and Hastings Street – two curved offset T intersections (7th Street free moving; see **Figure 6**)
- » Build 2:
 - Hillside Street and 5th Street – westbound approach closed
 - Hillside Street and Leon Street – southbound approach closed
 - 7th Street and Hastings Street – two offset roundabouts (see **Figure 7**)
- » Build 3:
 - Hillside Street and 5th Street – westbound approach closed
 - Hillside Street and Leon Street – two-way stop-controlled (Hillside Street free moving)
 - 7th Street and Hastings Street – two straight offset T intersections (Hastings Street free moving; see **Figure 8**)

Figure 6 – Draft of Curved Offset T configuration (7th Street and Hastings Street)

Figure 7 – Draft of Offset Roundabout Configuration (7th Street and Hastings Street)

Figure 8 – Draft of Straight Offset T Configuration (7th Street and Hastings Street)

TRAFFIC OPERATION RESULTS

The traffic operation results of the Existing and Build conditions are shown in **Table 2** and **Table 3**, respectively. Difference in delay between each Build scenario and existing conditions are shown in **Table 4**. Detailed traffic operation results are included in **Appendix A**. Future conditions were not assessed as part of this study due to limited future development expected for the study area and more attention paid to multimodal improvements vs capacity improvements as the existing intersection volume to capacity is very low.

Note: Values in brackets correspond to the worst approach LOS

Table 4 – Intersection Delay Difference - Build Scenarios

Intersection	2022 Build Scenario 1 Delay Difference (s)		2022 Build Scenario 2 Delay Difference (s)		2022 Build Scenario 3 Delay Difference (s)	
	AM	PM	AM	PM	AM	PM
Hillside St and 5 th St	-1	-1	-1	-1	-1	-1
Hillside St and 6 th St	+1	+0	+1	+1	+0	+0
Hillside St and Leon St	+0	+1	-2	-1	+0	+1
5 th St and Leon St	+0	+0	+0	-1	+0	-1
6 th St and Leon St	+0	+0	+0	+0	+0	-1
7 th St and Hastings St (north intersection)	-7	-7	-5	-4	-1	-6
7 th St and Hastings St (south intersection)	-5	-7	-4	-4	-1	-1

Under both the Existing and Build scenarios, all intersections were observed to operate under acceptable conditions. The difference in delay between each scenario is negligible for the most part. Restricting the movements at the intersection of Hillside Street and 5th Street to only allow northbound and southbound through movements would have no discernable impact on traffic operations within the study area. Travel times for the 400-500 vehicles that use the approach daily will likely be increased by less than an 1/8 of a mile by either using Leon Street to 3rd Street or using 6th Street to access Hillside Street.

Converting the intersection of Hillside Street and Leon Street to a two-way stop would have little impact on the intersection. Restricting the southbound movement at Hillside Street and Leon Street would reduce intersection delay by approximately 1-2 seconds without increasing delay at other study intersections.

The proposed curved offset T configuration at 7th Street and Hastings Street would improve intersection delay by 7 seconds in both the AM and PM peaks, and the straight offset T configuration would improve intersection delay by 1 second during the AM peak, and 6 seconds in the PM peak. The roundabout alternative at that location would improve intersection delay by approximately 4-5 seconds. A roundabout provides improved worst approach delay and LOS comparatively and has multimodal benefits to slowing traffic in all directions just to the west of Garnet Mesa Elementary School.

SUMMARY

All intersections operate under acceptable conditions, under both the Existing and Build scenarios. Differences in delay between the scenarios are negligible, showing little to no effect on traffic operations within the study area, should any of the Build scenarios be implemented. Additional travel time for the rerouted movements at this Hillside Street and 5th Street would also have little impact on drivers in the network. Due to significant safety improvements and minimal operational impacts, it is recommended that movements at the intersection of Hillside Street and 5th Street be restricted to allow only northbound and southbound through movements.

Converting Hillside Street and Leon Street to a two-way stop or restricting the southbound approach entirely would improve intersection delay by 1-2 seconds and would have little to no impact on surrounding intersection operations.

Both the proposed offset T configurations and the roundabout alternatives were observed to improve the intersection of 7th Street and Hastings Street, though the roundabout would provide benefits in reduction of through speeds and provide a better multimodal crossing. Minor approach delays are also minimized with the roundabout option versus the offset T configurations.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Hillside St and 5th St	Two-way stop	HCM 7th Edition	WB Left	0.013	11.7	B
2	Hillside St and 6th St	Two-way stop	HCM 7th Edition	SB Left	0.003	11.0	B
3	Hillside St and Leon St	Two-way stop	HCM 7th Edition	NB Left	0.014	11.6	B
4	5th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.069	9.9	A
5	6th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.058	9.6	A
6	7th St and Hastings St	All-way stop	HCM 7th Edition	EB Thru	0.228	8.2	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Hillside St and 5th St

Control Type: Two-way stop
 Analysis Method: HCM 7th Edition
 Analysis Period: 15 minutes

Delay (sec / veh): 11.7

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Hillside St and 5th St	Two-way stop	HCM 7th Edition	NB Thru	0.002	0.0	A
2	Hillside St and 6th St	Two-way stop	HCM 7th Edition	SB Left	0.007	11.1	B
3	Hillside St and Leon St	Two-way stop	HCM 7th Edition	NB Left	0.023	11.8	B
4	5th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.044	10.0	B
5	6th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.067	9.7	A
6	7th St and Hastings St	Two-way stop	HCM 7th Edition	SB Left	0.021	10.6	B
7	7th St and Hastings St	Two-way stop	HCM 7th Edition	NB Left	0.100	11.6	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Hillside St and 5th St

Control Type:	Two-way stop	Delay (sec / veh):	0.0

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Hillside St and 5th St	Two-way stop	HCM 7th Edition	SB Thru	0.002	0.0	A
2	Hillside St and 6th St	Two-way stop	HCM 7th Edition	SB Left	0.003	11.0	B
3	Hillside St and Leon St	Two-way stop	HCM 7th Edition	NB Left	0.014	11.7	B
4	5th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.069	10.0	A
5	6th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.067	9.7	A
6	7th St and Hastings St	Two-way stop	HCM 7th Edition	SB Left	0.015	10.6	B
7	7th St and Hastings St	Two-way stop	HCM 7th Edition	NB Left	0.039	10.9	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Hillside St and 5th St	Two-way stop	HCM 7th Edition	NB Thru	0.002	0.0	A
2	Hillside St and 6th St	Two-way stop	HCM 7th Edition	SB Left	0.007	11.1	B
3	Hillside St and Leon St	Two-way stop	HCM 7th Edition	NB Left	0.023	11.8	B
4	5th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.044	10.0	B
5	6th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.067	9.7	A
6	7th St and Hastings St	Two-way stop	HCM 7th Edition	NB Thru	0.020	10.6	B
7	7th St and Hastings St	Two-way stop	HCM 7th Edition	WB Left	0.060	11.5	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Hillside St and 5th St	Two-way stop	HCM 7th Edition	NB Thru	0.002	0.0	A
2	Hillside St and 6th St	Two-way stop	HCM 7th Edition	SB Left	0.007	11.1	B
3	Hillside St and Leon St	Two-way stop	HCM 7th Edition	NB Left	0.023	11.8	B
4	5th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.044	10.0	B
5	6th St and Leon St	Two-way stop	HCM 7th Edition	SB Thru	0.067	9.7	A
6	7th St and Hastings St	Two-way stop	HCM 7th Edition	NB Thru	0.013	9.8	A
7	7th St and Hastings St	Two-way stop	HCM 7th Edition	WB Left	0.027	12.5	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.
